                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                          (Updated
                                                                                                                                                  The present invention provides transgenic animals which produce desired proteins, in this case pigs which expresses phytase in the salivary gland. Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the B. coli APPA phytase coding sequence. (Updated on 12-SEP-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention provides transgenic animals which produce desired proteins, in this case pigs which expresses phytase in the salivary gland. Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coli APPA phytase coding sequence. (Updated on 12-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RQTAFRELERVI.NFPQSNLCLKREKQDESCSLTQALPSELKVSADNVSLTGAVSLASMLT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention provides transgenic animals which produce desired proteins, in this case pigs which expresses phytase in the salivary gland. Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coli APPA phytase coding sequence. (Updated on 12-SEP-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a method for producing phytase that involves CC providing a nucleic acid encoding phytase derived from a bacteria, and CC expressing the nucleic acid in a yeast under conditions that allow CC expression of the enzyme in the yeast. The invention also relates to CC modified phytase enzyme which has improved thermal tolerance and protease CC improve the feeding value of phytase enzyme can be used in foodstuffs to CC improve the feeding value of phytate rich ingredients, and in diet of CC numerous animals including mammals, fowls and fishes, commercially CC significant mammals such as pigs, goats, laboratory rodents, commercially CC significant avian species such as guppy, zebrafish, molly, swordtail, CC commercially farmed fish such as guppy, zebrafish, molly, swordtail, CC etc., in dough making and baking, in dietary aids for animals. The method CC composition, higher yields and loading efficiency. The phytase CC incorporated in to the dietary aid is safe for animals. The present CC sequence is Escherichia coli K12 appA phytase enzyme mutant.

Phytases of the invention is a thermostable protein. They are useful in foodstuffs, for oil degumming, producing an animal feed, delivering a phytase enzyme supplement to an animal, increasing the resistance of a phytase polypeptide to enzymatic inactivation in a digestive system of an animal and in processing of corn and sorghum kernels. The invention is also useful in gene therapy and in production of transgenic animals. The present sequence is a Escherichia coli phytase mutant protein which is encoded by appA gene.
 Escherichia Synthetic.

The present sequence is that a novel modified phytase derived from the CR Sscherichia coli appA protein, with improved thermal tolerance and CR protease stability compared to the wild-type. The present invention CR relates to a novel formulation, comprising at least one polypeptide CR having phytase activity, where the polypeptide is a modified sequence CR (AEE7541) derived from the Escherichia coli K-12 appA phytase CR (AEE75419). The modification of the enzyme, comprising a series of CR (AEE75419). The modification of the enzyme, comprising a series of CR (AEE75419). The modification also claims a pharmaceutical composition; a CR kit; an immobilized phytase; a fertilizer or soil additive, a liquid CR supplement for preventing muscle cramps; a hydrating agent; a tissue CR culture or cell culture media; and a plant food additive, all comprising CR the novel phytase, and a method of reducing pollution and increasing CR culture tavailability in an environment or environmental sample by CR degrading environmental phytic acid. The novel enzyme is a dietary culture media; and preventing or reversing osteoporosis or bone loss, and preventing muscle cramps. The liquid supplement is useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                13-AUG-1997;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         for preventing muscle cramps. The method is useful for reducing pollution and increasing nutrient availability in an environment or environmental sample by degrading environmental phytic acid, where the environment or environmental sample comprises a soil or a body of water. The immobilized phytase is useful in foodstuffs for improving the feeding value of phytate rich ingredients.
                                                                                                     24-MAY-2002;
                                                                                                                                                                                                        US2003103958-A1

                                                                   맑
                                                                                                                                                                                                          The invention discloses a new isolated or recombinant nucleic acid which ce encodes a polypeptide having a phytase activity. Also claimed is a composite of the nucleic acid, a vector comprising the nucleic acid, a vector comprising the nucleic acid, a transgenic non-human animal or plant, or its seed, comprising the nucleic acid, a phytase message in a cell, a heterodimer comprising the translation of casecond domain, an array comprising immobilised polypeptide or nucleic acid, a hybridoma comprising a mantibody that specifically binds to the card, a hybridoma comprising a nantibody that specifically binds to the card, a hybridoma comprising a manimal, an edible enzyme delivery card, a feed composition, a soybean meal, isolating or identifying the polypeptide, a feed composition, a soybean meal, isolating or identifying the polypeptide, making an anti-phytase antibody, producing a recombinant polypeptide, determining whether a compound binds to the polypeptide, continuity and the entranslative films analysis, increasing the resistance of the phytase polypeptide to enzymatic inactivation in a digestive system and processing of corn and sorghum kernels. The phytase cativity comprises catalysis of phytate (myo-inositol-hexaphosphate) to inositol and inorganic phosphate and is thermotolerant. The nucleic acid is useful in improving the feeding value of phytate rich ingredients or case an aid in phytate digestion. The sequence presented is the modified

             K12 appA phytase. The enzyme has phytase activity and improved thermal tolerance when compared with wild-type phytase. It has improved protease stability at low pH. The recombinant phytase is useful for improving the nutritional value of phytate-containing foodstuffs and subsequently improving the growth performance of an organism that consumes it, in treating animal digestive systems, in feed treatment processes and for in treatment processes and for in the consument of the systems.
                                                                                                                                                                                                                            New bacterial phytase for e.g. improving the nutritional value of phytate -containing foodstuffs and subsequently improving the growth performance of an organism that consumes it, or in treating animal digestive systems.

Condification from W68E, 084W, A95P, K97C, S168E, R180Y, N226C or Y277D.
CC Also included the E. coli apph gene ADA194450 and having amino acids correctly derived from it) or its mutant sequence ADA19455.
CC derived from it) or its mutant sequence ADA19450 are phytate-containing foodstuff by contacting the phytate-containing foodstuff by contacting the phytate-containing foodstuff by contacting the phytate-containing foodstuff), a method to produce an animal feed containing a containing foodstuff), a method to produce an animal feed containing a converting the plant cells, plant part or plant under conditions where the nucleotide sequence is expressed and converting the plant cells, plants or plants or plant into a composition for animal feed composition for animals (comprising the plant seeds, plant cells, plant parts or plants in admixture with a phytate-containing codstuff), a method to treat a human or an animal able to benefit from diseative enhancement by the activity of an exogenous phytate enzymes comprising administering to the human or animal the plant seeds, plant cells, plant parts or plants of a transgenic plant which is modified to contain an expression system which expresses a nucleotide sequence encoding a phytase enzyme, a transgenic non-human organism whose genome comprising a heterologous nucleic acid sequence encoding a polypeptide having phytase activity. The phytate enzyme is useful for improving the nutritional value of phytate-containing foodstuff, in the production of animal feed and for enhancing digestion in humans and animals. The containing the plant entry of an expression of animal feed and for enhancing digestion in humans and animals. The present containing the presents E. coli K12 mutant phytase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 59; Fig 8; 62pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Isolated Escherichia coli polynucleotide encoding a modified phytase enzyme, useful in the production of animal feed, for improving the nutritional value of phytate-containing foodstuff and for enhancing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI; 2003-040002/03.

Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coil APPA phytase coding sequence. (Updated on 12-SEP-2003 to standardise OS field)

Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coll APPA phytase codding sequence. (Updated on 12-SEP-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention provides transgenic animals which produce desired proteins, in this case pigs which expresses phytase in the salivary gland. Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coil APPA phytase coding sequence. (Updated on 12-SEP-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                     The present invention provides transgenic animals which produce desired proteins, in this case pigs which expresses phytase in the salivary gland. Low phytase production levels result in phytate in the diet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the E. coli APPA phytase coding sequence. (Updated on 12-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Transgenic non-human animal for gastrointestinal tract specific expression of a protein, preferably phytase, comprises a nucleic sequence including a heterologous transgene construct encoding the
                                                                                                                                                                                                                                                                                                        Sequence 432 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Disclosure;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                             The present invention provides transgenic animals which produce desired proteins, in this case pigs which expresses phytase in the salivary gland. Low phytase production levels result in phyrate in the dilet being excreted and causing phosphorus contamination in water, as well as reducing the growth of animals. The invention provides a number of transgenes containing the B. coil APPA phytase coding sequence. (Updated on 12-SEP-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                            Transgenic non-human animal for gastrointestinal tract specific expression of a protein, preferably phytase, comprises a nuclei sequence including a heterologous transgene construct encoding
